Sioux Steel Company v. KC Engineering, P.C. Chad Kramer, PE September 29, 2016

Doga 4	Dono
Page 1	Page
UNITED STATES DISTRICT COURT DISTRICT OF SOUTH DAKOTA	1 STIPULATION
SOUTHERN DIVISION	2 It is hereby stipulated and agreed, by and between the
***************************************	3 above-named parties through their attorneys of record, whose
SIOUX STEEL COMPANY, a South Dakota corporation,	4 appearances have been hereinabove noted, that the deposition
Plaintiff,	5 of CHAD KRAMER, PE, may be taken at this time and place;
vs. Civ. 15-4136	6 that is, at the offices of Boyce Law Firm, LLP, 300 South
KC ENGINEERING, P.C., an Iowa corporation,	7 Main Avenue, Sioux Falls, South Dakota, on the 29th day of8 September, 2016, commencing at the hour of 9:03 a.m.; said
Defendant.	9 deposition taken before Audrey M. Barbush, a Registered
	10 Professional Reporter and Notary Public within and for the
Deposition of: CHAD KRAMER, PE	11 State of South Dakota; said deposition taken for the purpose
Date: September 29, 2016 Time: 9:03 a.m.	12 of discovery or for use at trial or for each of said
*********************	13 purposes, and said deposition is taken in accordance with
APPEARANCES	14 the applicable Rules of Civil Procedure as if taken pursuant
Mr. G. Verne Goodsell Goodsell Quinn, LLP	15 to written notice. Objections, except as to the form of the
Rapid City, South Dakota	16 question, are reserved until the time of trial. Insofar as
and	17 counsel are concerned, the reading and signing of the
Ms. Amy Ellis Sioux Steel Company General Counsel	18 transcript by the witness is not waived.
Sioux Falls, South Dakota	19 -oOo-
Attorneys for the Plaintiff	20
Mr. Michael F. Tobin	21
Boyce Law Firm, LLP Sioux Falls, South Dakota	22
Attorney for the Defendant	23 CHAD KRAMER, PE,
ALSO PRESENT: Jason O'Mara, KC Engineering	24 called as a witness, having been first duly sworn,
REPORTED BY: Audrey M. Barbush, RPR	25 testified as follows:
	25 Iosinied as follows:

The court reporter
Exhibit 5 - Design file, PLF 1363-1385 Exhibit 6 - Weekly Engineering Report, 7-20-12 PLF 1089 Exhibit 7 - KC Engineering Proposal, 7-30-12 KC 81-82 Exhibit 8 - Weekly Engineering Report, 8-10-12 PLF 1079-1080 Exhibit 9 - KC Engineering Analysis, 8-28-12 PLF 3-32 44 -000- (The original transcript was provided to Mr. Tobin.) -000-	4 A Good morning. 5 Q We just met. My name is Mike Tobin, and you understand that I represent KC Engineering in this lawsuit brought by Sioux Steel? 8 A Yes. 9 Q I don't believe we've ever met before. 10 A We have not. 11 Q I'm going to guess that you went over some of this with the attorneys, but just as a reminder: 13 If I ask a question that you don't understand, will you please stop me and let me know? 14 will you please stop me and let me know? 15 A Yes. 16 Q Because I want to make sure that any answer you give, you understand the question when you give that answer. 18 Okay? 19 A Understood. 20 Q And then let's both try not to talk over each other, and I need to do that as well. The court reporter appreciates if she only takes down one thing at a time.

Sioux Steel Company v. KC Engineering, P.C.

Chad Kramer, PE September 29, 2016

KC En	gineering, P.C.			September 29, 20
	Page 21			Page 2
1	chosen for.	1		problem?
2 Q	Is there a particular computer program outside of Excel	2	A	Yes.
	that helps you do this, or is your Excel set up to	3	Q	So you would have seen that we have a problem at the
4	essentially produce this mathematical calculation on	4		28-foot diameter
5	page 1376?	5	Α	Yes.
6 A	I'm not sure I understand your question.	6	Q	and also at the 15-foot diameter?
	Well, how does all the information, all the math on	7		Yes.
	page 1376 I mean how does that get there? I'm	8	Q	In fact, at the 28-foot diameter we have a very big
	assuming you have to input some information.	9		problem, correct?
10 A		10	Α	The ratio is over 1, yes.
1 Q	And then is the Excel just doing the math for you?	11		I mean it's I don't want to parse words with you,
2 A		12	•	but we are we're almost up to 4.
	And is the information that you're inputting, is that	10.00	A	Yes.
	the stuff below the table or above the table and	100		What did you then do, if anything, after you saw those
	below the "Hopper Panel Vertical Splices" heading?	15	*	numbers to change your design in any way?
	Yes.	13.0	Α	We didn't know that these numbers were at those levels
	At the far right there's the utility ratio?	17		until post failure, and at that time we made design
	Utilization ratio.	18		changes.
	Utilization ratio. Thank you.	19	0	So okay. You never saw or appreciated these numbers
0	What does that tell someone like yourself? What	20	Y	pre-failure?
	do those ratios mean?	21	٨	I did not.
	It tells you how much the how much of the allowable	22		Was that a mistake on your part? I mean you should
	capacity is utilized.	23	V	have realized these numbers pre-failure?
	Okay. And it's my understanding that we want to be	24		Let me start over.
	below 1; is that correct?	25		The bin that was manufactured and shipped down to
	selow 1, is that correct:	23		The oil that was manufactured and shipped down to
	Page 22			Page 2-
1 A	Yes.	1		Mexico and that failed
2 Q	So, for example, at the 28-foot diameter it's my	2	Α	Yes.
	inderstanding that those vertical seams would be	3	0	it went out per the design in Exhibit 5?
	overstressed by 389 percent.	4		Yes.
5	Is that how you would read that?	5		And it would have had utilization ratios at the 28-foot
6 A		6		and the 15-foot diameter that are problems?
	And then at 15 feet those vertical seams are	1000	Α	Yes.
	overstressed by 152 percent?	8		And you'll agree with me that the hopper bin should not
	They would be overstressed by 52 percent.	9	~	have gone down to Mexico with utilization ratios at
	And at 4 foot, we're below 1, so that would be a number	10		those seams of 3.89 and 1.52?
	hat that we would like to see?	11		Yes. There was a math error. Yes.
2 A		12		
	As a design engineer all three of those utilization	13		maybe that's part of our disconnect here. But, I mean,
	atios should be below 1, correct?	14		a mistake was made by Sioux Steel in the design of this
	Yes.	15		bin, correct?
	What did you do when you saw that at the 28-foot	16		Yes. I made a mistake, yes.
	liameter and the 15-foot diameter we are above 1?	17		And that mistake is yours?
	I'm not sure what exactly you're asking.			Yes.
	Well, I'm assuming that when you did the design, you	18		
	eferenced and referred to this page	19		Post failure you said you made some changes. What
. F	La company to the com	20		changes were made to account for these design errors?
	1 65.	21	A

Sioux Steel Company v. KC Engineering, P.C. Chad Kramer, PE September 29, 2016

AC EI	igineering, r.c.			September 29, 201
	Page 5	7		Page 59
1	That doesn't account for a free-falling mass that has	1		believe the failure started at the top of the cone?
2	bridged, does it?	2	A	I'm saying that the stresses in the panels were highest
3 A	It does account for that because, you know, bridging,	3		at the top of the panels.
	arching, and ratholing are dynamic pressures that the	4	Q	And I agree with you. We looked at your math from your
5	overpressure factor accounts for.	5		design and that bears that out, correct?
	So you believe the 1.4 is going to account for a	6	A	Right.
7	freefall of a bridged mass?	7		And that's from Exhibit 5.
8 A	You keep using your hand and using "a bridged mass." I	8		Have you seen the video?
	mean, I guess I'm unclear as to what you're asking or	9	Α	I have not.
	what you're trying to get at. It's unclear to me.	10		Have you seen the pictures that show those panels after
	I'm trying to get at exactly what happened in Mexico in	11		the event?
	February of 2015. Let's just jump right there.	12	A	Yes.
3	What's your understanding of how that catastrophe	13	0	And does it not appear that most of the panels are
	happened?	14	`	still connected towards the top of the cone, whereas
	My understanding is that to some extent there was	15		almost all of them have failed at the bottom?
	bridging in the hopper and that's what caused it to	16	A	They're connected on the horizontal seams at the top,
	fail.	17		yes.
	There was bridging in the hopper of soy meal, correct?	18	0	
9 A	Yes.	19	*	seams left connected towards the top of the cone?
	And some amount of it broke free or free fell, correct?	20	A	I don't recall for sure.
	We have no way of knowing for sure, but that's what has	21	0	
	been discussed, yes.	22	×	that's the event I keep referring to. I think Mr. Nohr
	And then it hit the bottom of the cone, correct?	23		is quite clear that soy meal that had bridged broke
	Yes.	24		free and free fell and hit that cone and that is what
	And then once it hit the bottom of that cone, it	25		then caused the event.
	Page 5	3		Page 60
1	essentially exploded out the bottom and those vertical	1		Do you disagree with a bridge and then the free
	seams almost unzipped from a bottom-up motion, correct?	2		fall of the soy meal?
	Not necessarily.	3	Α	No.
4 Q	Have you reviewed the report of Rod Nohr?	4		And that's what I keep referring to; that from a design
_	I have looked at the report, yes.	5	•	perspective there's nothing you can't necessarily
	And you understand that he was the expert hired by	6		design or there's no 1.4 number out there that's
	Sioux Steel to go investigate this failure?	7		going to account for the free fall of a bridged
2 10	Yes.	8		material, is there?
	Do you disagree with anything Mr. Nohr says?	9	A	There are obviously varying degrees of bridging because
	Yes.	10	''	again, you know, they discuss those dynamic load cases
	You do?	11		is why you apply the overpressure factor. So you are
	Yes.	12		accounting for bridging, arching, and ratholing. You
	What do you disagree with Mr. Nohr about?	13		are accounting for that with an overpressure factor.
	He didn't do any math calculations on the design of the	14	0	Is what you're telling me that had those vertical seams
	hopper. He did a report based on visual observation on	15	V	on that cone down in Mexico if those vertical seams
	the video that he saw. And when you look at the math,	16		would be as they are now you told me that post
	the stress is highest at the top of those vertical	17		failure there were some changes being made, correct?
	joints. So that's where failure should have occurred	18	٨	Correct.
	based on what you see, you know, based on utilization	19		
	ratios.	20	V	So you're telling me that on the hopper cones out there
		21		now post failure, you're not concerned about free fall
-	But Rod Nohr believes that the failure began at the	1000		of a bridged material hitting the bottom, or are you
	very bottom of the cone, right? That's what Mr. Nohr believes?	22		telling me that those new seams would somehow have
		23		prevented the tragedy that occurred down in Mexico?
- A	That's what was in his report, yes.	24		MR. GOODSELL: I'm going to object to form and
	Are you telling me you disagree with that and you	25		foundation.
